COURSE UNIT DESCRIPTION

Course unit title	Course unit code
Human Computer Interaction	

Lecturer(s)	Department where the course unit is delivered
Coordinator: Kristina Lapin **Other lecturers:**	Department of Software Engineering Faculty of Mathematics and Informatics Vilnius University

Cycle	Type of the course unit
1st (BA)	Compulsory

Mode of delivery	Semester or period when the course unit is delivered	Language of instruction
Face-to-face	5th semester	Lithuanian, english

Prerequisites
Prerequisites: -

Number of credits allocated	Student's workload	Contact hours	Individual work
5	136	68	68

Purpose of the course unit: programme competences to be developed

Purpose of the course unit – to help students to develop human-centered design skills and to apply the principles and methods to the creation of user interfaces with any technology.

Generic competences:

- Communication and collaboration *(GK1).*
- Life-long learning *(GK2).*
- Social responsibility *(GK3).*

Specific competences:

- Knowledge and skills of underlying conceptual basis *(SK4).*
- Software development knowledge and skills *(SK5).*
- Technological and methodological knowledge and skills, professional competence *(SK6).*

Learning outcomes of the course unit: students will be able to	Teaching and learning methods	Assessment methods
Function effectively on multidisciplinary teams to accomplish a common goal.	Group project, brainstorming seminars, group discussions.	The presentation of the group project assignments, peer assessment
Independently acquire new knowledge, modern wireframing and prototyping tools, user study, interaction design and evaluation methodologies to apply them in practice.	Study of literature, case study, group project	Exam (open and close questions as well as tasks), written reports of group project assignments.
Understand professional and ethical responsibility doing user studies in a natural environment as well as usability testing	Lecture, augmented with written information and images (interface examples, diagrams, tables, conceptual schemes and video) on slides, case-based teaching, data gathering in a natural environment, demonstration, group discussion, group project, peer	
Apply foundations of mathematics, psychology, ethnography and sociology, knowledge of engineering, computer science theory in software systems development.		

Become familiar with new software engineering applications, to appreciate the extent of domain knowledge, to evaluate the complexity of the problems and the feasibility of their solution.		
Design, implement, and evaluate a user interface to meet desired needs		
Select and use appropriate current techniques, models, solution patterns, skills and tools, necessary for the creation of user interface mockups and prototypes involving emerging application areas.		
Use existing hardware, software and application systems, to identify, understand and apply the promising technologies.		

Course content: breakdown of the topics	**Contact hours**							**Individual work: time and assignments**	
	Lectures	Tutorials	Seminars	Practice	Laboratory work (LW)	*Tutorial during LW*	**Contact hours**	**Individual work**	**Assignments**
1. The importance and evolution of the Human Computer Interaction.	2						**2**	1	Individual reading of literature.
2. Usability of interactive products.	2				1		**3**	1	Group project essays:
3. User-centered design.	2				1	*2*	**3**	2	1) Description of user needs and task analysis;
4. User needs analysis.	2				4		**6**	4	
5. Prototyping interaction and task analysis	2				6		**8**	6	
6. Low- and high-fidelity prototyping.	2				1		**3**	1	2) Usability testing report.
7. Usability and accessibility design rules.	2				2		**4**	1	
8. Graphical user interface.	2				2		**4**	6	Group project assignments
9. Human physical abilities: vision, memory, attention and consciousness.	2					2	**2**	1	3) Alternative mockups
10. Design for human experiences and attention	2				1		**3**	1	
11. Information architecture	2				2		**4**	2	4) Heuristic evaluation
12. User research	4				2	2	**6**	8	
13. Analytical evaluation	4				2		**6**	10	5) High fidelity prototype
14. Usability testing with users	2						**2**	2	
15. Group project case analysis					8		**8**	6	
16. Preparation for and taking an exam		2					**4**	16	2 hours – consultancy 2 hours – exam taking 16 hours – preparation.
Total	**32**	**2**	**0**	**0**	**32**	**6**	**68**	68	

Assessment strategy	**Weight %**	**Deadline**	**Assessment criteria**
Group project assignments	50	During the semester	2 group project essays – of 1 point. 3 group project assignments – of 1 point. It is required to participate in at least 3 presentations. In case this requirement is violated – the grade of is reduced by 10%.
Participation in discussions/cases studies/ presentations	5	During the semester	Ability to analyze question or case, associate it with acquired knowledge and formulate the answer. The correct answer is worth 0.3 points.

Peer evaluation	5	During the semester	Ability to argument the benefits and drawbacks of the peers' essays and assignments. 5 assignments of 0.1 points.
Exam	40	Exam session	Ability to demonstrate and apply the knowledge. Exam contains open and close questions and tasks.
